

THE STRATEGIC PLAN OF THE FACULTY OF GENERAL MEDICINE FOR 2023-2030

Having celebrated the 68-year anniversary of educational activities in Uzbekistan and Central Asia, the Faculty of General Medicine is not looking back and looks forward to what the next 6 years will bring to the institute and Uzbekistan. The Faculty of General Medicine is responsible for training highly qualified personnel in the field of higher education, healthcare and public health, further improving the system of advanced training for employees, organizations with qualified medical specialists, including primary medical and sanitary institutions, as well as working with honesty and transparency. It attains this by using advanced Western educational methods through a commitment to core values such as student care and educational excellence. We take into account the results of 6 years of growth and change. This enabled the Faculty of General Medicine to become a nationally recognized, student-centered and self-governing educational institution in the field of medicine.

This strategic plan provides a roadmap to help the Faculty of Medicine seize new opportunities and develop the nation's future. The goals and associated strategic objectives allow us to describe how we provide services to Uzbekistan over the next few years:

- training of personnel on the basis of joint educational programs and academic mobility programs in cooperation with leading foreign medical universities for areas with a high need for qualified specialists;
- widespread introduction of advanced and distance educational technologies in the process of training specialists with modern knowledge and skills, attracting highly qualified teaching staff, development and implementation of electronic educational resources;
- support the development of scientific and pedagogical potential, active improvement of pedagogical technologies and teaching methods;
- conduct promising innovative, practical and fundamental research in such areas of health care as sanitary epidemiology and public health, disease prevention, parasitology, microbiology, virology, the development of a healthy lifestyle, as well as solving existing problems in practical medicine;
- providing scientific and methodological support to colleges of public health and medical colleges named after Abu Ali Ibn Sina;

- strengthen and develop long-term cooperation in the field of education and science with leading medical organizations and scientific centers of foreign countries;
- modernization and strengthening of the material and technical base, equipping the simulation center, educational and scientific laboratories with modern equipment.
